

I decided to do a soccer “real football” website. It is called “Real Football Reports” *Know your Passion*. The website has some statistics about the CONMEBOL teams or South American region teams. The entire website is on one page with a nav at the top to get users to the section they want. I have to jQuery effects on the Rankings section for each google graph, the user will be able to click on the “expand”, which I made a button for. There is a different effect for each of the 2 expand buttons.

Modernizr checks if Canvas is supported and it is informed on the console. The website does not contain any Lorem Ipsum.

The first graph is a bar chart using chart.js; the chart shows the world cup wins the CONMEBOL teams have. The website has a small gallery using Lightbox and all images were acquired from Wikimedia Commons. The google charts are very good for Data Visualization. The rankings Combo Chart was supposed to be one chart but it was very hard to see the information because of all the information; I divided the combo chart into two combo charts because of this.

The video section contains a video of me juggling for about 14 seconds and I converted the video into three formats so that it is supported. The logo was made using canvas and drawscript; the drawing of the man kicking a ball was taken from The Noun Project, it said I had to include a text they provided; it had to be placed in the same page where the drawing was used. I placed this text in the footer. The second use of canvas is with chart.js.
